

VA Certification, Automated.

AllowED replaces spreadsheets, dual screens, and 15-minute-per-student manual workflows with an AI-powered engine that certifies veteran enrollments automatically.

93% Time Savings	525→35 SCO Hours/Semester	\$24,500 Savings/Semester	4,000+ Target Schools
----------------------------	-------------------------------------	-------------------------------------	---------------------------------

The Problem

School Certifying Officials manually process every VA enrollment certification. At SDSU alone, that's **2,100 students per semester** — each requiring 15 minutes of cross-referencing PeopleSoft, DARS, WEAMS, and VA Enrollment Manager across dual screens. One SCO. 525 hours. Every semester. And one mistake means a VA audit.

BEFORE AllowED	AFTER AllowED
15 min per student, manual entry	<1 min per student , automated
Dual-screen PeopleSoft + EM workflow	Single workstation , all data unified
Spreadsheet tracking, error-prone	Real-time dashboard , batch certification
Manual WEAMS cross-reference	6,543 programs auto-matched with confidence scoring
SCO catches errors by memory	63-check decision tree catches everything
Audit = weeks of pulling records	Full audit trail , every decision traceable

How It Works

1	Connect AllowED reads enrollment data from PeopleSoft, Ellucian, or CSV upload. No SIS changes required.
2	Automate 7-step decision tree evaluates every course against VA rules: DARS, WEAMS, modality, training time, rate of pursuit. 63 checks per student.
3	Certify Clean enrollments batch-certify in one click. Flagged students route to SCO review queue. Amendments auto-generate. Submit to VA via API.

"I built AllowED because nobody else who's building VA tech has ever sat in the SCO chair. Every rule in this system comes from 2,100 certifications per semester — not a whiteboard."

— Paulina Enriquez, SCO at San Diego State University & Founder, AllowED

Platform Status

Feature	Status
7-step decision tree (63 checks)	✓ Live
WEAMS crosswalk (6,543 programs, 25 schools)	✓ Live
SCO Workstation with Supabase backend	✓ Live
Batch certification + HITL review queue	✓ Live
Amendment detection + auto-generation	✓ Live
VA Benefits Intake API (sandbox)	✓ Live
Multi-institution support (25 universities)	✓ Live
PeopleSoft live integration (SDSU pilot)	■ Q3 2026
